

Investment Management, Personal Investment

CAUTIOUS RISK INCOME EXAMPLE PORTFOLIO

This portfolio has an asset allocation that is designed to carry a modest degree of risk and might suit a cautious investor whose objective was to maintain the capital value of their portfolio, in real terms, over the medium to long term whilst providing a higher than average income. The investments included may be funds investing in equities, bonds, property and commodities. The proportion of these investments held will vary in response to our view of markets.

■ Cautious Risk Income Model (Total Return GBP) +71.44% ■ FTSE APCIMS Income Index (Total Ret GBP) +47.14%
Performance: Total return gross of fees from 01/02/08 to 31/05/14. Detailed analysis of performance is available on request.

Cautious Risk Income Portfolio performance vs. APCIMS Income Portfolio					
Annualised percentage returns. Portfolio returns are illustrated net of 1% p.a. management fee.					
	1 Yr Performance	3 Yr Performance	5 Yr Performance	5 Yr Volatility	Div yield
Portfolio	6.76%	8.39%	11.95%	6.06%	3.89%
Benchmark	4.97%	7.15%	9.89%	6.87%	
+/- Benchmark	+1.79%	+1.24%	+2.06%	-0.79%	

This model has demonstrated stronger growth than its benchmark in good market conditions and a smaller decline in poorer conditions. It contains approximately one-third risk assets and two-thirds low risk assets though this will vary according to our views. The underlying equities held are mostly large companies and include a broad range of sensitivities to economic conditions. The individual funds held are selected for their past performance and our belief that this performance can be sustained. Funds are also selected for their income characteristics. The performance demonstrated is simulated and represents that which would have been obtained had this selection of investments been held for the entirety of the period.

Risk Warnings Opinions constitute our judgement as of this date and are subject to change without warning. Certain investments carry a higher degree of risk than others and are, therefore, unsuitable for some investors. The value of investments, and the income from them, can go down as well as up, and you may not recover the amount of your initial investment. Where an investment involves exposure to a foreign currency, changes in rates of exchange may cause the value of the investment, and the income from it, to go up or down. Simulated past performance and actual past performance is not a reliable indicator of future results.
